

Perio-Prostho Corner Did You Know...

...complete dentures can be fabricated digitally?

Dr. Charlene Solomon
Prosthodontist BChD,
MScDent, MChD, FRCD (CA)

ClearCare
Periodontal & Implant Centre

With improved digital manufacturing methods and workflows, digitization of complete denture processes is gaining attention as a way to improve and streamline provision of care to our patients.

With minimal investment any dental office can easily integrate digital denture workflows and take advantage of its benefits. In addition to reduced number of visits, digital methods can provide true try-in prostheses and provide improved quality of fit that reduces the need for post-operative adjustments. All in all a much better experience for both our patients and ourselves. Does this mean most clinical steps are eliminated? Well, not yet. There are still foundational and key clinical elements that are required for creating ideal geometries and functional parameters for the final prostheses.

Let's have a conversation about workflows, laboratory processes and how to get started with digital dentures in your clinic. We will also be discussing the benefits and how to create predictable results with digital workflows. ClearCare invites you to an evening with Dr. Charlene Solomon "Incorporating Digital Workflows for Complete Denture Fabrication"
